This character has not been in any of the characters in the game so far If you want to support me, you can checkout my PayPal or Patreon A long time ago someone made a cheat for me using this program. Link 1 Link 2 A: A: Sub-title: Game Over The game ended with a Game Over screen that happened when the points that you got at the end were equal or lower than the enemy's KI (pointing towards less health / damage being more damage or less health). The few bosses in the game were immune to this effect, but a stat of 2, 4, or 1 cannot be defeated. The ending screen (in the Japanese version of the game) doesn't just show the ending screen that the game normally does, but it shows a character which has a red face and a button that reads "Game over". However, even at the end, if you managed to get a 4 in defense, you get to beat the enemy, get a bonus KI, a very pretty picture, and some text that reads: Your hero has finally returned. Thank you for playing the game. Of course, if you manage to get a 2 in defense, you end up with a picture of a "White Fourleaf Clover" that looks like a "frowning face". Q: ASP.NET MVC 3 - Custom Membership User model Im wondering about the best way to create a custom user model in MVC 3. Let me explain. I have a requirement in my MVC project for administrators to have a certain type of profile, let's call it Administrator. Now, let's say I need to give myself such profile without affecting any of the other users, like I'm a single client, for example. I've read the ASP.NET Membership User Model documentation, which is pretty straight-forward, but i am wondering if there is a way to have a custom-made model for my users without having to write my own MembershipUser type. A: I don't think there is a built-in way to do this, however, you can certainly create your own UserProfile model, and return that model to the controllers. I'm not sure what level of customization you need, so the following example is written with the assumption that it should be a fairly basic, bare-bones model: public class UserProfile
