Field of the Invention The present invention relates to a plastic encapsulated semiconductor device and a method of manufacturing the same, and in particular, to a plastic encapsulated semiconductor device, which has a semiconductor chip having a rectangular or square shape mounted on a substrate and a solder resist applied to a surface of the substrate, and a method of manufacturing the same. 2. Description of the Related Art Semiconductor chips have been conventionally sealed with a ceramic body made of alumina (Al<sub>2</sub>O<sub>3</sub>), silicon carbide (SiC), or the like, and various kinds of ceramic packages have been developed, such as a QFP (Quad Flat Package) and a pin grid array (PGA) package. In order to manufacture the ceramic packages, ceramic sintering is first performed and the thus-obtained ceramic material is punched into a predetermined size. Then, a ceramic substrate (frame) having a frame-shaped recess is mounted on one surface of the ceramic material. A
