Have you tried to go into the bios and disable USB controller !? I have not tried this, but I think it may help. I am not aware of another option with the gp60wb50 and I cannot find any reference to any such setting in the user manual. I will try to report back tommorow and let you know if that was a solution. My LG GP50NB40 is a newer drive and it is listed under Linux software, but it didn't work with any of the ones I tried. The only one that worked was an older one from USB 2.0 compatibility. I tried to install the LG GP50NB40 to both USB 2.0 and USB 3.0 ports and I also tried some other USB ports to see if the problem was only with the first USB port. I have downloaded the LG USB driver and extracted the ZIP folder but when I tried to install the USB driver, it always returned an error message that the driver is installed, but the USB drive is unable to be recognized. Please help me out. A step by step installation tutorial for Windows and Mac users. You need to install a driver for this device.
