
☒ Normally the GUI and the keymacro module would be two completely separate things. I wanted the ability to write keymacros that could be loaded into the keymacro module. For example, I would like to do a macro for playing the key of A major. I couldn't do it with one of the C major macros out there because the default key is C major, but this new keymacro would be for A major. I've written several macros for A minor, C major, and C minor, but the user needs to play them with the A minor keymacro in the keymacro module, then go into the keymacro module to use the A major keymacro. It would be pretty simple to have a way to select the keymacro in the GUI, but I figured I'd do it this way and make life easier for others that may want to try this. It would not be necessary to play the keymacro in the keymacro module, only to use it to create new macros. ☒ In the new module, there are several different keymacro types that are indicated by the type of item that is clicked on in the GUI. (See the various section titles above for the different types of keymacros) ☒ All of the keymacros I've created so far have a maximum of four items and have a certain number of items displayed at once. I figured since I was creating this for myself, I'd try to keep it simple. However, when I get the feedback from other people, I might be able to alter the number of items displayed, the maximum number of items and the number of items played at once. ☒ If one selects an item in the keymacro module, it will play the keymacro and then stop. In other words, it will not just play the macro until you press the Stop button. That way you can do a completely automatic test of how well you could tell the key of a song by playing the keymacro. The way it is programmed now, if you stop, all the items in the keymacro module will play until you start the keymacro again, or stop it. (For example, you select four notes in the keymacro module, then stop it, then start it again and then play the 4 notes you selected. The 4 notes will play through because you did not stop the module, but each one of the 4 notes will be played 70238732e0
