```

[Download](#)

**Download**

Leave the files in this folder (depotcache) run Phoenix, it will search ... Now go to the CSD Unpacker tab ... Select the folder where to unpack ## and specify a program to unpack. After that start Phoenix. Next, click on the Generate button. You will see that Phoenix installation files have been generated. This will be \*\_phoenix\*.exe file and \*\_hds\*.exe file (this is a decompressor) and \*\_cad\*.exe file (this is a CAD viewer). Run \*.vdi file \*\_phoenix\*.exe. This will open the Phoenix installation window, which will look something like this: Click the Next button. Next, select the folder where Phoenix will be installed. fffad4f19a
