E-PunchClock Std PC/Windows (2022)

E-PunchClock Std is a small Windows application designed specifically for

helping you place a time clock, also called punch clock, on your desktop in order to track the hours worked by an employee of a company. User interface

When you run the program for the first time, you are welcomed by a built-in wizard that helps you create a username and password. The tool sports a clean feature lineup that allows you to view the current time and date displayed in the main panel, pick the desired user, embed custom notes, as well as punch in or out.

You can switch between two viewing modes: a normal one which reveals the time and date with big digits or minimal. Plus, you can run multiple instances of the utility, log out the current user or all users, and create custom groups in order to organize users. User Manager E-PunchClock Std integrates a built-in User Manager that allows you to keep track of all users and add a new account by providing information about the username, password, salary per hour, and

number of daily hours. Additionally, you may opt for a standard or administrator account and assign the current user to a group. Rich suite of configuration settings The application gives you the possibility to choose the desired time format, show or hide the date, password-protect admin features, block export/report functions, allow users to edit their own punches, require users to log in and ask for password for each punch, display the login window as a list

of users or name and password, automatically log out after a user-defined number of minutes, and log out after each punch. What's more, you are allowed to tweak the pay period, display accumulated hours, automatically back up data every day to a user-defined location from your computer or remote database (MySQL or PostgreSQL), as well as run command-line parameters. Bottom line All in all, E-PunchClock Std comes bundled with a handy suite of

features for helping you make use of a punch clock in order to track the hours worked by an employee. Keymacro is a program for Windows to memorize keyboard strokes in order to activate macros. Keymacro comes with a complete suite of features that allows you to memorize a number of shortcuts or apply them by clicking in the specified area on the screen. Keymacro lets you record any number of keyboard shortcuts and press them by simply pressing the Hotkey. The Hotkey can be set either permanently or temporarily.

You can specify the Hotkey in order to repeat it every time the program starts or to execute a specific macro. Keymacro does not require additional software and can be used right away. It's easy to use: you just have to follow some simple steps. Keymacro is free, and also open-source. You can check the source code of the application or request more information directly from the author. To activate a macro, you simply press the hotkey and it's automatically recorded in

the specified area. You can choose from a number of predefined areas for recording, including the system menu, task bar, task bar button, desktop, menubar, File menu, Help menu, or any other area on the screen. Keymacro also supports rectangular recording. You can change the recording area by right-clicking and select “Change recording area.” In order to record a macro, select “Record.” The entire process is easy: you just have to follow the steps below.

Keymacro allows you to specify keyboard shortcuts that you want to record. Every shortcut can be assigned a macro name. Keymacro can record only one shortcut per macro. Keymacro allows recording shortcut for cut, copy, paste, cut and paste, and undo. A major plus of Keymacro is that you can specify any number of shortcuts to be recorded. You can also change the recording area without having to close the application. Moreover, Keymacro lets you define

your shortcuts in the form of commands.

You can search for commands in the entire Macros library or in a text file.

While recording, Keymacro displays several information that can be useful: number of shortcuts recorded, number of recorded commands and macros, and the number of times the hotkey is pressed. Keymacro also has a recording statistics that displays the number of shortcuts that you've recorded. Keymacro stores the recording information in the CSV

format. You can transfer this information in your favorite text editor, for example Notepad. 77a5ca646e
