AutoLISP: The Interactive Programming language is a popular tool for customization. AutoLISP has been developed by Autodesk for many years, starting with AutoCAD 2, and now being provided in AutoCAD LT starting at version 2011 and later. It can be used both as a language for custom applications and as a scripting language. It is also used by the Dynamic Input and Language Tools (DISTL) for creating macros. Visual LISP: Introduced in AutoCAD R2007, Visual LISP was developed by Autodesk for creating add-ons that interact with the user interface, including the ability to programmatically modify user interface elements, such as dialog boxes. Visual LISP is a general purpose programming language that can be used to develop simple application programs as well as UI programming for AutoCAD. Visual LISP functions can be accessed through the Visual LISP Programming Viewer (VLISP). AutoCAD LT also supports VLISP, which can be used for similar purposes. Visual Basic: Introduced in AutoCAD R2007, Visual Basic was Autodesk's first attempt to provide a programming language to write AutoCAD add-ons. While it was popular in the first few years of AutoCAD, its popularity declined rapidly as AutoCAD became more powerful and the general-purpose nature of Visual Basic (as well as the fact that it is Microsoft's proprietary language) made it less attractive to developers. VBA or Visual Basic for Applications is a Microsoft scripting language used for automation of certain Microsoft Office applications, for example macros. VBA is also the scripting language used for developing custom parts in AutoCAD LT and has been superseded by ObjectARX in AutoCAD LT 2016. ObjectARX: Introduced in AutoCAD LT 2016, ObjectARX is an open-source C++ class library, offering a more modern and powerful alternative to VBA and VLISP. ObjectARX provides a set of programming interfaces that can be used by developers to create custom solutions for Autodesk products. The most recent version (5.5) supports C++/CLI (class based object oriented programming) and.NET Framework (a set of programming interfaces for the Microsoft Windows platform). AutoLISP for AutoCAD: In late 2007 Autodesk introduced a new version of AutoLISP known as AutoLISP for AutoCAD. While not a new language per se, Auto a1d647c40b
