KeyM◆age is a macro recorder application that can take your mouse clicks and automate repetitive tasks. [...] KeyM◆age Description: KeyM◆age is a macro recorder application that can take your mouse clicks and automate repetitive tasks. Program with C# and Visual Basic using this lightweight application You can record and replay any sequence of mouse clicks, as well as create custom actions and trigger keystrokes. It supports numerous commands, and you can easily program custom actions to change the title of the program, launch a file, open a folder, change the volume, or enable autorepeat. The application also allows you to set repetition intervals, so you can easily create a regular task like opening a file. KeyM◆age is a very useful tool if you are looking for a simple, yet powerful, mouse recorder. Immediate record/replay of keystrokes One of the great features of KeyM◆age is the ability to record and replay any sequence of keystrokes. Program with C# and Visual Basic using this lightweight application KeyM◆age offers extensive configuration options, and the application comes with several preset commands. As well as recording mouse clicks, you can also program custom actions or launch other programs. When the macro recording session ends, you can have the program open the specific file or folder at the specified location. KeyM◆age allows you to program a wide variety of macros, and the UI is very intuitive. You will be able to quickly learn the basics of programming with this handy tool. Verdict: 9]]> 11 Dec 2014 05:20Tue, 01 Jul 2013 00:07Love is the word of the day. Imagine if you didn't write a simple app in days. The truth is, that some apps could be best in months. Even weeks. Same goes for projects of any scale. There is a clear correlation between a large amount of time spent in an app's development and the final result. Now, some of you might say: "Well, this is obvious. Everybody knows that. It's just hard. Nobody can finish all apps in months. It's impossible." You might be right. But you are 77a5ca646e

Waf DotNetPad

Waf DotNetPad is a lightweight C# and Visual Basic code editor. It features syntax highlighting and auto-completion, and it has a simple UI. Json DTO Viewer Shows You The Aspects of Your Json Object Simply The average developer is very familiar with the json array and object structures. The json object structure is also a very common format, since the object itself is very easy to understand, even for non-developers. However, what most people often forget about is the json array, since the structure of the json array can be quite confusing to grasp for non-developers. Json DTO Viewer (Json for Java Developers) is a simple application that provides a convenient way of visualizing your json objects. Why should I use Json DTO Viewer? Json DTO Viewer allows you to quickly view the aspects of your json objects simply. There are 2 types of json objects, which are Object and Array. You can view the JSON Object and Array visually, and you can get detailed information about the json object. As you view the JSON Object and Array, you can view the information of the json object, such as Name, Value, Children, Key, Value. You can view the json objects in graphical form, and you can search for them easily. You can preview the json objects in the screen. How to open Json DTO Viewer? Json DTO Viewer can be opened simply by double-clicking on the Json DTO Viewer icon. Json DTO Viewer can be used with Windows 8 / Windows 10 and Android / iOS, MacOS / Windows Phone. nbind GND is a simple menu driven project management tool for developers.
