I am trying to understand what happens with a Nan in python, here is some code i have import random import numpy x=random.randint(0,100) y=random.randint(0,100) a=random.randint(0,100) b=random.randint(0,100) t=x/a t=t*y x=t*a y=t*b #print(t) I am confused as to why these Nan's appear when running the code i have written. I am new to python, and am looking for any explanations as to why they are. Thanks A: This is due to the division by zero. When you have a==0, the result of the division is a NaN (Not a number). To see this in action, type this in your interpreter a / 0 You will see a very long string of stuff with NaN in it. Symptom management for patients with chronic liver disease. Chronic liver disease is a leading cause of death worldwide. Patients with liver disease present in a range of different medical and surgical settings. Diagnosis is often confirmed by the use of a liver biopsy and when necessary, in many centres, blood tests or imaging studies. In this article we assess the role of non-specific treatments (in particular, those of symptom relief), specific treatments (including pain and psychological therapies and the use of liver transplantation) and the management of other co-morbidities (such as diabetes mellitus) in clinical practice for people with chronic liver disease.And we all know that if you've been doing the same thing for decades without making any progress, it's time to admit your true calling is, well, doing the same thing. The so-called "Game
