But there's more to Photoshop than meets the eye, so this book isn't just about Photoshop. I also cover the rest of Adobe's graphics software, including Photoshop Elements. If you want to learn other pieces of the Adobe product line (such as InDesign and After Effects), this book will help you fine-tune your understanding of these programs so that you can do your job with them. You'll also find a lot of tips that will help you in your digital photography and graphic design projects as well. The next section gives you a tour of the programs and the types of files that you can edit. Mastering the Tools Photoshop was the first program that defined the major art forms of today. It has gradually faded to the background as graphics-editing programs from other manufacturers have proliferated. But Photoshop remains the most popular piece of the Adobe product line, and it's the basis for most of the operations that people do in their computer graphics and photo editing. Photoshop doesn't have a lot of focus or fancy new features, just the essentials that everyone wants — they just need to be performed in a different way now than they were five years ago. Adobe programs like PhotoShop, Dreamweaver, and InDesign have all taken on a similar tack, so by the time you read this book, you should be able to make use of all the tools and features that I cover. Organizing images The starting point for most people using Photoshop is organizing and editing digital photos and graphics. But how you prepare those files is a very important first step, because if you don't prepare your digital image properly, it's like throwing spaghetti at the wall and hoping that you get a pattern. With digital photos, it's crucial to know how to manipulate your files to make sure that you're getting a good result. (Don't worry, you won't turn into a pro photographer overnight.) Preparation for digital graphics is similar to preparing a photo file, but you don't have to know anything about science to create a good-looking image. However, you do need to know about the properties of layers and about the most common tools that you find in Photoshop so that you can transform and manipulate the files correctly. Fortunately, this book contains the information that you need to have in order to know how to do all these things. Although you may think that getting your hands dirty is the best way to learn, having a solid understanding of the basic principles

Q: How do I "undelete" an image that was accidentally deleted from a folder? I accidentally moved an image to a totally different directory, and then deleted the original. I still want to have that image. How can I "undelete" it? A: You can't, sorry. The best you can do is make a copy of the file and link it to the original location. A: Try using this software A: For Linux (and probably other Unix-like OSes), if you know the target filename and are on a file system that supports symbolic links, you can use `ln` to create a link to the file that will resemble what the file was before. You can then cat the link to paste the file contents into the old location. Q: Are there any ways to find out if a module is used in a magento site? In Magento for the admin side the Admin SMS module is used to configure your SMS option, but when I run the following query: `SELECT module_setup_module, module_code, description, admin_compare, admin_compare_value FROM app/code/local/namespace/Module/Setup/Module as module WHERE module_setup_module = 'Namespace_Module' AND module_code = 'AdminSms'` I get 0 results I need this as I am trying to make a custom admin module. A: This should be pretty easy, but as you can't find any information about it, here's a list of possibilities. Create a table in `app/code/local/namespace/Module/Setup/Module/` I would suggest to use table prefixes, so it will be easier to add another table later. Inside the table - `module_setup_module module_code description` now, create a function like this in `app/code/local/namespace/Module/Setup/Module/` function `getModule($module_name) { $modules = Mage::getModel('namespace_module/module')->getCollection()->addFieldToSelect('module_setup_module')->addFieldToSelect('module_code') ->add`
