Mouse-Bot Screenshots Clicker-Bot is a software created to bring fun to the real-life clicking. It is easy to use and requires little to no time and skill to master. By targeting a simple and predictable AI, Clicker-Bot overcomes the tedious aspects of human clicking in different situations. You can save configurations, utilize the built-in tutorials or make your own according to your own scenario, by adjusting the settings. It is compatible with all touch-based devices and comes at a very affordable price. The main feature of Clicker-Bot is that it recognizes the exact pixel coordinates on the screen at which the mouse has been positioned. You are able to automatically set exactly which actions will be performed at those coordinates, which is where Clicker-Bot really shines. You can choose what actions you would like the bot to perform and start a new session by pressing on the 'Start Bot' button. A game or application can be started by clicking on the game's icon and then selecting the application you would like to start the game for you. The bot's movements can be automatically configured through the presets which you can access by pressing the '+' sign on top of the bot's screen. There is a tutorial, which is basically what you would find with the app in its basic mode. It explains the basics and allows you to start a new application or game, for example. You can also adjust the delay or the length of your game, so that it fits your own preference. Alternatively

Mouse-Bot Torrent Download is an efficient application that can automate various tasks by empowering the mouse to perform various actions repeatedly. It is suited for situations that require you to click the mouse continuously, such as in a game or any other repetitive activity. By automating such gestures for you, it reduces the time you'd be spending to achieve the tasks by hand. 19 comments: I downloaded it but it does not seem to be working. Mouse-bot just sits there... Hi there. Is it possible to get some kind of support for Mouse-Bot? I'm hoping that they have a support team who can aid with problems, as I'm not 100% sure about the application itself. On a related note, is it possible to input coordinates manually, as opposed to letting the program identify them? I really need to be able to specify them. I have just installed the new version 0.3.3.1. It now says "Mouse-Bot can now launch web browsers for you" Is this for real? Are they actually attempting to make the program into a browser? If they are I think that is the point in which I'll uninstall the program and revert to using my iPad browser. I did not find any documentation on how to add images from a folder (in.csv format). Is this possible? I have.csv files with images stored on my C: drive. It would be great if there was a choice to open these images. I have some trouble with the mouse-bot. I have a dual monitor: one laptop and a second monitor. The mouse-bot can't interact with the mouse on the laptop on the dual monitor. I'll have to use the single monitor to have the mouse-bot work well, but it's a little annoying. I am also having problems with the two buttons being pushed at the same time. When I reach my maximum capacity of tasks, I get the message "not enough free time. you have 2 tasks" and by pressing bot on the mouse-bot nothing happens. If you have 2 tasks (eg play a game) then press bot, it does nothing. I have tried various things to no avail. Being a new mouse-bot user, is there any way to configure the quality of the screenshots? This is so annoying, and I'm also having this problem At the start of the program there is a window that says'mouse-bot b7e8df5c8
