However, we humans see color in a slightly different way, so we'll explain how colors work in a bit more detail. The RGB color scheme is a three-color system that uses three values for each of the three colors in a color wheel. If you need to re-create a color in Photoshop that you see in a picture, you start by choosing the RGB color. You can also enter RGB values into an RGB color using the Info palette. If you look at a color wheel, you'll notice that colors are not distributed evenly; instead, they follow a pattern, as shown in Figure 1.24. You can see that these colors look brighter at the top, which the human eye assumes is where light comes from. The color wheel is one of the more complex visual representations you can use to help you understand color. If you need to get more educated about it, there are several books available on the topic. **Figure 1.24** : Using the HSB color wheel to understand color The HSB wheel provides a more visual explanation of what the RGB color values mean for each of the three components of a color. In a nutshell, the H represents the brightness and saturation of the color. The S is the saturation and the B is the tone of the color. When you select an RGB color, you can see an approximate representation of that color in a sample window. You can view the color using the Info palette, which we will discuss a bit later. One of the differences between Photoshop's Channel Mixer and the RGB color wheel is that the Channel Mixer can be used to mix and match the color components to create more intense colors than you can with the RGB color wheel. The Channel Mixer will be discussed in Chapter 5, "Color Modes and Adjustments." For now, you'll learn how to

Effects Most effects in Photoshop are obtained by blending two or more images. The new layer is used as a "container" for the blended layers. One layer can be a solid color, or a pattern image (like a Gradient Overlay, Pattern Overlay or Gradient Map). It can be a layer from another image (a Color or Multiply Layer, or a Layer Comp), or it can be a brush tool. There are several basic types of Blend Modes you can use: ::*SolidColor:* This is the "default" blend mode for any layer. The layer is a solid color. It's not affected by any other layer. ::*Normal:* This is the default blend mode for all image layers except Brush and Layer Comp layers. The image is composed of a clear color followed by a blend of the two layered images. This makes the image appear to have two distinct layers. ::*Hue:* This blend mode uses the primary color of a layered image (represented in HTML by #rrggbb). This makes the layered image appear to be composed of a clear color along with the blend of colors in the two layered images. ::*Color:* This is another blend mode that lets the blended image have a clear color. The blended image does not depend on the colors of the two layers. ::*ColorBurn:* This blend mode replaces the background color of the layered image with the primary color of the layered image. ::*ColorDodge:* This blend mode replaces the background color of the layered image with the average of the two colors used to layer the image. ::*HardLight:* This blend mode replaces the background color of the layered image with the primary color of the layered image. This blend mode is similar to the Dodge mode. ::*SoftLight:* This blend mode replaces the background color of the layered image with the primary color of the layered image. This blend mode is similar to the Burn mode. ::*PinLight:* This blend mode replaces the background color of the layered image with the primary color of the layered image. It replaces the background color with a pin-hole filled color. It's useful for making something like a framed photo look blurry, or making the foreground look out of focus. ::*HardMix:* This blend mode replaces the background color of the layered image with the average of the two colors used

What's New in the Adobe Photoshop CC 2015 Version 17?

Illustration by David Parkes Last month, Mary Kay McLaurin, a Democrat serving in the Missouri House of Representatives, was arrested in Kansas City on a drug charge after a panicked employee apparently mistook her appearance for that of an undercover cop. She was carrying about 200 tablets of the narcotic hydrocodone. The employee, who was later fired, indicated that he'd mistaken her for the police because he thought she was in a position to be carrying drugs. In fact, he was about to testify at her trial. McLaurin has admitted being a drug addict, but is contending that she was carrying prescription hydrocodone under her own name. The woman's heroic mistake is, of course, what has attracted the world's attention. It also, unfortunately, reveals something about the citizenry generally. The fact is that, in America, being mistaken for a narc is a common cause of arrest, resulting in nearly six times the number of arrests for possession of a controlled substance that there would be if suspicion of illicit behavior were accorded its appropriate status. If you have an illicit item on you, you should, obviously, be arrested. It's not much of a crime to be carrying 200 hydrocodone tablets. But if you resemble someone who does, that's the day you're arrested. There is, of course, nothing bizarre about such arrests. Anti-intellectualism is the shared feature of morality and law, and it always has been. It's simply a matter of how we apply the standard. We don't usually call someone who looks like a suspect, but that person is nonetheless arrested. That is consistent with our morals and laws. Indeed, anti-intellectualism extends even to the interpretation of the law. One of the most common places the pernicious tendency manifests itself is with the laws against marijuana. They are almost impossible to justify as defensible law. "Marijuana is like opium," William Carlos Williams once wrote. As far back as 1848, President James Buchanan remarked that if he could "prove to the world that the use of ardent spirits and opium were more pernicious and destructive of life than the use of marijuana, he would surrender his political rights." In the same term, William McKinley (yes, that William McKinley) said he didn't care if marijuana was
